DETAILED ACTION

1. The response filed on 5/15/09 has been received and considered. Claims 1-5, 8, 10-16 are presented for examination.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Stephen Wight, Reg. No. 37,759 on 7/16/09.

The application has been amended as follows:

Claim 1, lines 14-15, the phrase "for a transmitted via the device connectivity protocol;" was changed to --for the emulated device;--

Claim Objections

3. The objections to claim 13, recited in the 1/15/09 Office Action has been withdrawn in view of the amendments to the claims filed 5/15/09.

Claim Rejections - 35 USC § 103

4. The rejections of the claims in view of the prior art recited in the 1/15/09 Office Action have been withdrawn in view of the amendments to the claims filed 5/15/09.

Allowable Subject Matter

5. Claims 10-12 are allowed as recited in the Reasons for Allowance set forth in the 1/15/09 Office Action.

6. Claims 1-5, 8, 13-16 are allowed.

7. The following is an examiner's statement of reasons for allowance: While **Kim et al** ("Design and Implementation of Home Network Systems Using UPnP Middleware for Networked Appliances", IEEE Transactions on Consumer Electronics, Volume 48, Issue 4, Nov 2002, page(s): 963 – 972) teaches (claims 1, 13) a method and computer readable media storing a software framework of a device emulator for emulating devices communicating through a device connectivity protocol, including processing, in a device emulator, a description of a device to be emulated in the device connectivity protocol, the description specifying a set of actions of the device to be emulated, in response to receiving an action request from a control point at the device emulator per the device connectivity protocol, checking the action request against the device description in the device emulator to validate which action out of the set of actions specified in the description the action request matches and upon validating an action to which the action request matches, producing, at the device emulator, a default response, the response based upon the description such that, through the response the device emulator emulates operation of the device to be emulated, **Hite et al** (US Patent 7,213,061) teaches a generic device emulator capable of emulating more than one device based on device descriptions, **Skingsley et al** (US Patent 6,697,751) teaches an

Art Unit: 2123

apparatus for testing and monitoring the transmission of data packets by communications equipment including an emulator that simulates a variety of network conditions for a variety of packets that embed a range of protocols and over a range of types of networks wherein defective behaviors are applied to packets transmitted into the network, and **UPnPIC** (“UPnP Device Certification Process Document”, Version 1.0, 2001) teaches the certification testing of a UPnP device including protocol, syntax and semantic tests wherein the tests confirm if a device properly responds with an error to a specific action and teaches that device descriptions are written in XML, **none of these references taken either alone or in combination with the prior art of record disclose** a method of generically emulating devices communicating through a device connectivity protocol and computer readable media having stored thereon a software framework of a generic device emulator, the method and generic device emulator specifically including:

(claim 1) “...reading a device defect configuration file representing at least one defect behavior to be applied to a type of packet transmitted as part of a message for the emulated device;

upon production of a valid packet for the emulated device, as part of a message, the valid packet being of a type for which a defect behavior is represented in the device defect configuration file, applying the defect behavior to the valid packet upon producing the packet to create an invalid packet for the emulated device; and

transmitting the invalid packet for the emulated device as modified by applying the defect behavior...”

(claim 13) "...program code for reading a device defect configuration file representing in a tagged text format at least one defect behavior to be applied to a type of packet transmitted from the emulation of the device within the device connectivity architecture;

program code for applying the defect behavior to a packet upon producing the packet of a type for which a defect behavior is represented in the device defect configuration file; and

program code for transmitting the packet at modified by applying the defect behavior..."

in combination with the remaining elements and features of the claimed invention. It is for these reasons that the Applicant's invention defines over the prior art of record.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

9. Applicant's arguments, see pages 7-8, filed 5/15/09, with respect to Claims 1 and 13 have been fully considered and are persuasive. The rejections of the claims in view of the prior art of record, recited in the 1/15/09 Office Action, have been withdrawn.
